

UTADT ADT Tires

The UTECH UTADT is specially designed for articulated dump trucks, loaders, underground mining trucks. It is engineered to deliver superior traction, great self-cleaning capability, extra load capacity and exceptional endurance in mining and quarrying.

Parts Details Of UTADT ADT Tires

10% more traction delivered by optimized tread pattern and extra deep tread:

- The non-directional tread design with big blocks and open shoulder grooves delivers high fore, aft and lateral traction, and superior self-cleaning capability
- The ultra-wide tread design offers improved stability and high flotation, and the extra deep tread improves grip and extends wear life.

Architecture enhanced with high tensile steel belt package and robust carcass for superior impact resistance and higher load capacity:

- High tensile steel belt package built in for better impact and puncture resistance.
- Robust carcass: new structure ply cord and lengthened ply cord wrapping-up.
- The bead bundle is designed in semicircle shape, which greatly increases the adhesion, making the bead part stronger and the structure more stable.

Tread base and sidewall thickened for better cut and puncture resistance:

- Super thick tread base is applied to increase the puncture resistance.
- The sidewall is thickened for better cut resistance and impact.
- Special cut resistance compound is used to increase the life cycle.

Specifications of UTADT ADT Tires

Size	Star Rating	TRA Code	Rim	Section width		Overall Diameter		Tread Depth		Load Index & Speed Symbol	Type
				in	mm	in	mm	32nds	mm		
23.5R25	★★	E4/L4	19.50/2.5	24	600	65	1660	69	55	185B/201A2	TL
